

ColorGo®

**Powdered Reducing
Bleach /
Dye Remover/
Neutralizes PermaGo®**

ColorGo®

ColorGo is a versatile powdered reducing bleach that can be used on the spotting board or in a bath to remove unwanted dye or residual stains.

ColorGo can also be used to neutralize PermaGo®.

ColorGo contains Sodium Metabisulfite and is packaged in 1-pound jars.

DIRECTIONS

Before starting, read and understand the ColorGo Material Safety Data Sheet.

◆ **To Remove Unwanted Dye or Residual Stains in a Bath:**

Rinse fabric thoroughly with water and put aside. In a clean plastic container or stainless steel wash wheel, prepare enough solution (2 oz. ColorGo for every gallon of 150-180°F water used) to allow free movement of fabric. Immerse fabric in ColorGo solution and agitate. (Heating the solution will increase its ability to remove dye stains; boil if necessary.) Rinse thoroughly with water after stain disappears. Follow with normal washing procedure.

◆ **To Remove Unwanted Dye or Residual Stains on the Spotting Board:**

Prepare a solution of ColorGo and warm water in a clean spotting bottle. Moisten stained area of fabric with steam. Apply ColorGo solution to stained area and let stand until stain disappears. (Heating the solution with dry steam will increase its ability to remove tough stains.) Rinse thoroughly with water after stains disappear.

◆ **To Neutralize PermaGo®:**

Use complete PermaGo/ColorGo directions from PermaGo bottle or from PermaGo overview.

* * * * *

- ColorGo will remove most dyes. Before using ColorGo solution on colored fabric, test on a hidden seam to see if original color is affected.
- When working on wool, do not heat ColorGo solution excessively or agitate fabric unnecessarily.
